(a) gain-weighted identity
300 random instances
max. rel. error 6.2×10^{-15}
$n\,\mathrm{RMS}^2$ (simulated pass)
$\mathrm{tr}(MB)$
(b) capacity floor
capacity floor
attaining memory
one delta-rule pass
squared recall error
operator-norm budget B
(c) coherence: $\Theta(\mu n)$
simulated pass
$\mu = 0.01$
$\mu = 0.03$
$\mu = 0.06$
closed form
error F_i
item index i $(n = 30)$
